JS&AdvJS,Bootstrap,HTML5 project description

Design website that contains any type of products for any
company (fashion dresses, flower shop, laptops, mobiles, …., etc.)

Design your website sections and choose your own colors and
contents The web site will contain the following Pages

1- Home Page
     Is your website basic Page. Displaying

2-login Page

2- Register Page with validations(username—min & max numbers,email
pattern,phone number pattern)

3- Gallery (which contains a set of pictures for the product with brief description and
read more link) ,Read more link will redirect to another Page that contains full
description of the product and form to send purchase request) , Buy button
Add this product to your order and order details will be in cart Page,My Cart button
to redirect to Cart Page with order details

     --Note(if user clicked Buy Button and not registered must be
redirect to register Page ,or if he already a member and not loign
redirect to login Page)

4- Contact Us
       Contain form to take data (name,mail ,subject)and

5- About Us – description about your work and your website with mapping all Pages

6- My Cart (each product you choose to buy it added to this cart and in this Page you
will display your order details   and button with confirm buying by sending mail

Notes:

1-store your data for (products ,categories ,images) at file as array of objects and loading it with ajax according your logic need ,you can find any dump data over network

2- All images must be allocated in separate folder named images.(Dialing with images at public folder with static paths
3-saving each your register data and order request for each user using (local storage or cookies) ---u will need (JSON.parse,JSON.stringfyl) for save object at local storge
4-each Page has separate js file with object structure

5- Project deadline will be at(24-10-2020) @ 11:59 PM via Email
 And will be live discussed anther day determined according to your schedule

Good Luck ☺
